#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-4,6-17,19,21-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burns et al(US 5,931,947) in view of Hsu(US 5,584,023).

Claim 1: Burn's patent discloses detecting a file system request in (col.4,lines 29-35). Burns discloses completing the file system request in (col.6,lines 40-43). Burns discloses receiving return information from the file system request in (col.11,lines 1-25). Burns discloses determining whether the file system request is for a tag file associated with a secured file and if so, modifying return information to reflect a file attribute of the secured file in (col.11,lines 49-57 and col.12,lines 62-67;col.13,lines 1-27). Burns does not specifically disclose providing at least one tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs. Hsu's patent discloses this limitation in (col.17,lines 40-56). It would have been obvious to person of ordinary skill in the art at the time invention was made to have tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs in order to enhance the security of its data such that it deceives hackers to attack empty file while preserving integrity of its orginal file.

Art Unit: 2135

- Claim 2: Burns disclosesfile attribute is file size in (col. 12, lines 48-50).
- Claim 3: Burns disclosed determining whether return information identifies a plurality of tag files associated with a plurality of secured files and if so, modifying the return information to reflect a file attribute of the plurality of secured files in (col.7, lines 39-55).
  - Claim 4: Burns disclose/secured file is stored in encrypted form in (col.7,lines 39-48).
- Claim 6: Burns discloses secured file is stored on a remote networked device in (col.5,lines 30-33 and fig.1).
- Claim 7: Burns disclose file system request is to open a file in (col.11,lines 65-67;col.12,lines 1-7).
  - Claim 8: Burns disclose file system request is to delete a file in (col.11,lines 28-30).
- Claim 9: Burns disclose file system request is to rename a file in (col.11,lines 65-67;col.12,lines 1-7).
  - Claim 10: Burns disclose file system is to query file information (col.6, lines 27-33).
- Claim 11: Burns disclose file system request is to set file information in (col.10,lines 63-65).
- Claims 12,13: Burns discloses file system request is to find a first matching file in (col.12,lines 61-67).
  - Claim 14: Burns disclose/file system request is directory control in (col.12,lines 20-35).
  - Claim 15: Burn's patent discloses detecting a file system request in (col.4,lines 29-35).

Burn disclose completing the file system request in (col.6, lines 40-43). Burns disclose receiving return information from the file system request in (col.11, lines 1-25). Burns disclose determining whether the file system request is for a tag file associated with a secured file and if so, modifying return information to reflect a file attribute of the secured file in (col.11, lines 49-57 and col.12, lines 62-67; col.13, lines 1-27). Burns does not specifically disclose providing at least one

Art Unit: 2135

tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs. Hsu's patent discloses this limitation in (col.17, lines 40-56). It would have been obvious to person of ordinary skill in the art at the time invention was made to have tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs in order to enhance the security of its data such that it deceives hackers to attack empty file while preserving integrity of its orginal file.

- Claim 16: Burns discloses file attribute is file size in (col.12, lines 48-50).
- Claim 17: Burns disclose/determining whether return information identifies a plurality of tag files associated with a plurality of secured files and if so, modifying the return information to reflect a file attribute of the plurality of secured files in (col.7,lines 39-55).
  - Claim 19: Burns disclose secured file is stored in encrypted form in (col.7, lines 39-48).
- Claim 21: Burns disclose secured file is stored on a remote networked device in (col.5,lines 30-33 and fig.1).
- Claim 22: Burns disclose file system request is to open a file in (col.11,lines 65-67;col.12,lines 1-7).
  - Claim 23: Burns disclose file system request is to delete a file in (col.11.lines 28-30).
- Claim 24: Burns disclose file system request is to rename a file in (col.11,lines 65-67;col.12,lines 1-7).
  - Claim 25: Burns disclosesfile system is to query file information (col.6, lines 27-33).
- Claim 26: Burns disclose file system request is to set file information in (col.10,lines 63-65).

Art Unit: 2135

Claims 27,28: Burns disclosesfile system request is to find a first matching file in (col.12,lines 61-67).

Claim 29: Burns disclosesfile system request is directory control in (col.12,lines 20-35).

Claims 30,31: Burns and Hsu patent disclose all the limitation, see claim rejection 1 above. It is inherent in system of Burns and Hsu to include a computer implemented instruction/algorithm to carry out data processing method such as detecting file system request and completing file system request between two systems.

Claims 32: Burn's patent discloses detecting a file system request in (col.4,lines 29-35). Burn discloses completing the file system request in (col.6,lines 40-43). Burns discloses receiving return information from the file system request in (col.11,lines 1-25). Burns discloses determining whether the file system request is for a tag file associated with a secured file and if so, modifying return information to reflect a file attribute of the secured file in (col.11,lines 49-57 and col.12,lines 62-67;col.13,lines 1-27). Burns does not specifically disclose providing at least one tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs. Hsu's patent discloses this limitation in (col.17,lines 40-56). It would have been obvious to person of ordinary skill in the art at the time invention was made to have tag file comprising a physical file of zero bytes in length; maintaining the tag file in a part of a file system and processing file system calls so that the tag file appears to as a secured file containing data from the view of a user, operating system and programs in order to enhance the security of its data such that it deceives hackers to attack empty file while preserving integrity of its orginal file.

Claim 33: Burns disclose file attribute is file size in (col.12, lines 48-50).

Art Unit: 2135

Claim 34: Burns disclose determining whether return information identifies a plurality of tag files associated with a plurality of secured files and if so, modifying the return information to reflect a file attribute of the plurality of secured files in (col.7,lines 39-55).

2. Claims 5,20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burns et al(US 5,931,947) in view of Hsu(US 5,584,023) and further in view of Johnson et al.(US 4,887,204).

Claims 5,20: Burns and Hsu patent does not specifically disclose secured file is stored in a secure virtual file system. Johnson discloses secured file is stored in a secure virtual file system in (col.13,lines 18-28). It would have been obvious to person of ordinary skill in the art at the time invention was made to store secure files in a secure virtual file system as taught in Johnson with file accessing system disclosed in Burns and Hsu in order to provide a uniform file oriented,multiple file system environment for both local and remote files. Further, secure virtual file system provide orderly mapping of stored information which allows user for easy access with security.

3. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burns et al(US 5,931,947) in view of Hsu(US 5,584,023) and further in view of Roberts(US 5,287,453).

Claim 18: Burns and Hsu disclose all the limitations above. Neither Burns nor Hsu specifically discloses file system monitor. Roberts patent disclose file system monitor in (col.5, lines 55-68; col.6, lines 1-5). It would have been obvious to person of ordinary skill in the art at the time invention was made to employ a file system monitor disclosed in Roberts with a network storage system taught in Burns and Hsu in order to monitor file activity and automated file processing like real time directory synchronizations. File system monitor allows files synchronization between servers, files that waste space on file servers (pollution files, temporary

Art Unit: 2135

files, games etc) where the system manages disk storage space by deleting unwanted files thus providing efficient way of managing data storage and data activity.

## Response to Amendment

4. Applicant has amended claims 1,15,30,32. Applicant's amendment necessitated the new grounds of rejection presented in this Office action.

### Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hosuk Song whose telephone number is 703-305-0042. The examiner can normally be reached on Tue-Fri from 6:00 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim Vu can be reached on 703-305-4393. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
